1. Python code to verify user_name = "Micheal" and password = "e3\$WT89x". The total number of attempts are 03. For every wrong user_name and password Print - Invalid username or Password

```

name="micheal"
password="e3$wt89x"
c=0
while(c!=3):
    c+=1
    testname=str(input("enter username:"))
    testpass=str(input("enter password:"))
    if((testname==name)and(password==testpass)):
        print("you have successfully login:")
        break
    else:
        print("invalid username and password")
    if(c==3):
        print("account locked")

```

main.py

Run

Shell

```
1 # Online Python compiler (interpreter) to run Python online.
2 # Write Python 3 code in this online editor and run it.
3
4 name="micheal"
5 password="e3$wt89x"
6 c=0
7 while(c!=3):
8     c+=1
9     testname=str(input("enter username:"))
10    testpass=str(input("enter password:"))
11    if((testname==name)and(password==testpass)):
12        print("you have successfully login")
13        break
14    else:
15        print("invalid username and password")
16 if(c==3):
17     print("account locked")
18
```

```
enter username:micheal
micheal
enter password:e3$wt89x
e3$wt89x
invalid username and password
enter username:micheal
micheal
enter password:e3$wt89x
e3$wt89x
you have successfully login
>>>
```
