Python:

Folloop, while loop,

Useful operators in hyllth.

Apensha-Shelty GAL16 ECOO6.

1. Is loop?

· A for 100p is used for iterating over a sequence.

· This is less like the for keyword on other programming languages, and works more like an Eterator method as found in other object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-object-obj

· With the for loop we can execute a set of statements, once for each item in a list, tup to set etc.

Programming example:

banana.

· puits = ["apple", "banana", "cherry"]

for x in Muis!

if x = = "banana":

break

paint x

Output:

2. while loop

· With the while loop we can execute a set of statements as long as a condition is true.

It alements as long as a condition is true.

I programming example

· £=1

While £ < 6:

brint(2)

2 +=1

Output:

2 3 H

3) Oseful operators in python:

operations are and to perform operations for on variables and value.

· Asifhnetic operator.

· Assignment operator.

· Companison operatos

- · logical operatos. Bit wise operatos.
